

# CNW 957

*Regenerative harmonics filter (400V/50 Hz)*

## Unique Selling Point

- Increases the efficiency of the drive by improving power quality
- Low losses save high energy costs
- Compact design and low weight
- Natural cooling
- Optional charging resistor

## Description

LCL filters are used especially in regenerative converters (AFE), but also for inverters for renewable energies. The main purpose of this filter is to eliminate the PWM frequencies for protect the supply network.

- Rated voltage: 3 x 400V / 50Hz
- Climatic category: 25/085/21 DIN IEC 68 Part 1
- Ambient temperature: 40°C
- Protection rating: IP00
- Optional: available with charging resistor

## Technical Data

- Nominal Voltage : 400 V
- Rated current : 14 - 74 A

## Circuit example

# CNW 957

*Regenerative harmonics filter (400V/50 Hz)*

## Technical and mechanical data

Type	Rated current [A]	L [mm]	B [mm]	H [mm]	N1 [mm]	N2 [mm]	D1 [mm]	D2 [mm]	Terminals [mm <sup>2</sup> ]	Image
